Full/Flex Survey

The 2019 *Auto Laundry News* Full/Flex Survey was conducted through a mailing of questionnaires to a random selection of our subscribers who own and operate conveyor car wash businesses other than exterior sites. The information presented in this report results from an analysis of data provided by respondents from locations throughout the United States.

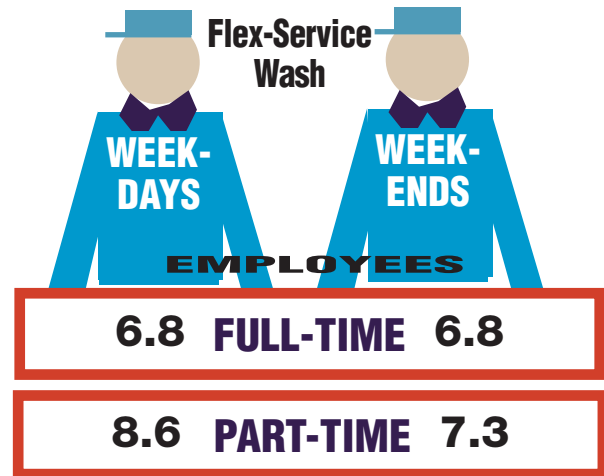

Full-Service vs. Flex-Service Sites

For purposes of comparison, survey responses from full-service sites are on occasion tabulated separately from flex-service responses. Full-service participants make up 82 percent of the total, with flex-service sites accounting for 18 percent. This compares to last year's split of 56/44. Two years ago, flex-serve participants made up 35 percent of the total, 28 percent the year before that. It looked like a trend was emerging; the current results put the kibosh on that notion.

This year, even fewer flex-service sites than in the previous survey claim to operate freestanding after-care centers — 40 percent versus 53 percent. Currently nearly three times as many full-serve participants as last year say they maintain an after-care center on site — 30 percent compared to 11 percent. Fully 80 percent of flex-service respondents vacuum after the wash, only a quarter of which do so at an after-care center. A large majority of full-service participants — 71 percent — continue to employ pre-wash vacuuming.

Revenues

Overall, 29 percent of respondents report increased income compared to the previous year, a remarkable reversal from the 46 percent that did so last year (the graphic on page 47 provides a four-year perspective). This is the lowest number recorded in our surveys of conveyor operations since 2008 when only 21 percent of respondents reported revenue growth. It should be noted, however, that the 2008 survey included exterior operations. Separate surveys of full/flex and exterior washes began in 2014 in which year 67 percent of full/flex sites reported income growth. In the current survey, full-service locations are largely responsible for this year's setback: 26 percent of these respondents report advances while 40 percent of flex-service sites do so. Nearly half (48 percent) of full-service respondents report diminished income. For flex-service sites the percentage is 40.
